

Fauzan Putra Sanjaya

Depok | [LinkedIn](#) | [Github](#) | +6281297312440 | sanjaya@ristek.cs.ui.ac.id | fauzansanjaya.dev

Information Systems undergraduate at Universitas Indonesia with a foundation in fullstack development and a rapidly advancing specialization in AI Engineering. Experienced in leading engineering teams to deliver scalable applications, while currently focusing on designing and deploying intelligent AI systems, including LLM orchestration, RAG pipelines, and Computer Vision models. A versatile problem-solver eager to bridge robust software architectures with cutting-edge AI technologies to build impactful, future-ready solutions.

EDUCATION

Universitas Indonesia

Depok, Indonesia

Bachelor's Degree : Major in Information System - GPA 3.75/4.00

2023 - 2027

- Relevant Coursework :
Enterprise System Development, Artificial Intelligence & Data Science, Enterprise Application Programming, Big Data Management, IS Analysis and Design, Computer Vision, Accounting & Enterprise Information System.

WORK EXPERIENCE

Halo AI

Jakarta

AI Solutions Engineer

June 2026 – September 2026

- Engineered & Deployed Omnichannel AI: Built custom, production-ready AI agents across WhatsApp, Shopee, and Instagram to automate 24/7 inbound sales, customer support, and localized brand interactions.
- Architected RAG & Custom Tool-Calling: Engineered retrieval pipelines and strict guardrails to accurately extract dynamic operational data (pricing, medical schedules, catalog) from client databases, enforcing zero-tolerance for hallucinations.
- Automated Business Workflows: Translated complex B2B SOPs into automated AI logic, integrating end-to-end appointment scheduling, CRM ticketing, dynamic invoice generation, and seamless human-agent escalation.
- Built AI Evaluation & Stress-Testing: Developed automated behavioral evaluation suites (auto-graders) and multi-turn simulations to proactively resolve adversarial edge cases during fast-paced, high-pressure client UAT cycles.

EMS Paramitra

Jakarta

AI Engineer Remote

March 2026 – June 2026

- Architected a Hybrid Search engine combining OpenAI semantic embeddings and PostgreSQL fuzzy search, achieving >95% OCR accuracy, directly improving client platform efficiency and delivering a measurable, outcome-driven MVP.
- Developed a scalable ML auto-classification system (KNN + category centroid embeddings) to automate the BankSoal question bank ecosystem, reducing manual operations and demonstrating ROI to client stakeholders.
- Leveraged cloud-based LLM APIs (OpenRouter) to build an end-to-end OCR cleaning pipeline, applying emerging AI technologies to solve real enterprise content management problems.

Telkom Indonesia

Jakarta

Fullstack Engineer Intern (Digital Product Division)

February 2026 – April 2026

- Engineered 5 high-concurrency enterprise applications (React, NestJS, PostgreSQL) for the Interactive Digital Solution Catalog, gaining direct exposure to large-scale digital product delivery within a top Indonesian telco.
- Implemented clean code architecture with asynchronous processing and data caching, ensuring highly reliable integrations aligned with SRE principles, demonstrating end-to-end system thinking relevant to client solutions.
- Maintained system observability and uptime for production services, applying agile methodologies across cross-functional engineering teams in a fast-paced enterprise environment.

TVRI Nasional

Jakarta

Mobile Developer

June 2025 – December 2025

- Engineered real-time chat features (WebSockets, Flutter) for the TVRI Citizen Journalism app, deployed on both Google Play Store and Apple App Store, managing full CI/CD pipeline and release compliance.
- Delivered production-grade mobile features under tight deadlines in an enterprise broadcast environment, ensuring stability and scalability for concurrent users.

Techno Glow Innovation

Cikarang

Software Engineer Intern

July 2025 - August 2025

- Developed AI-powered services for a B2B skincare simulator, automating workflows and implementing a PubMed API pipeline to scientifically validate product claims.
- Optimized backend content generation pipelines to reduce latency, supporting a real-time product demonstration successfully featured at the CosmoBeaute 2025 exhibition

Faculty of Computer Science

Depok

- Selected from a competitive pool (9% acceptance rate) to mentor 200+ students, evaluate coursework, and provide actionable feedback to improve learning outcomes.

ORGANIZATION

RISTEK Fasilkom UI

Director of Mobile Development

Depok

February 2025 – Present

- Lead the full development lifecycle of 3+ mobile applications, directing cross-functional teams to implement industry-standard agile methodologies and deliver high-quality client solutions.

COMPFEST UI

Person in Charge of Sponsorship

Depok

January 2025 – December 2025

- Executed high-stakes B2B pitching and strategic negotiations, successfully securing over IDR 250 Million in funding from major tech and consulting firms (Google Cloud, NTT Data, FEHA Consulting).

MATA UI - UI Student Association in Purwakarta

Vice President

Purwakarta

2023 – 2025

- Led a 77-member organization, strategizing and executing outreach programs to 12 regional schools to inspire prospective university students.

Safehome Anara Indonesia

Web Developer & Volunteer

Depok

May 2025 - May 2026

- Contributed to the Health and Public Service sector by developing an integrated digital platform for gender-based violence (GBV) victims (Funded by European Union & DPIS UI).
- Translated critical social support requirements into functional UI/UX accessibility designs, demonstrating a strong commitment to social sustainability and community impact.

PROJECT

PT DKE Smart Sales & CRM

Lead Programmer & Cloud Architect

Enterprise System Development

- Architected and deployed an enterprise-grade CRM platform integrating Next.js 16, Redis Pub/Sub, and an Odoo 17 backend to solve fragmented communication for a major aesthetic clinic, delivering a production-ready client solution end-to-end.
- Engineered a zero-latency, multi-session WhatsApp Shared Inbox using Server-Sent Events (SSE) and atomic SQL locking to prevent race conditions during ticket claiming and automated broadcast messaging.
- Implemented a fully automated CI/CD pipeline on Google Cloud Platform (GCP) Compute Engine using immutable Docker images and Cloud SQL, ensuring high availability and seamless module updates.

Emoji Inpainting & Restoration

Computer Vision Engineer

Computer Vision Project

- Developed a high-fidelity image inpainting system using Conditional GANs (Pix2Pix) to reconstruct masked/damaged emoji images, utilizing PyTorch for model implementation and training loops.
- Architected a U-Net Generator with skip connections to preserve high-frequency spatial details and a PatchGAN Discriminator to enforce texture realism, effectively solving the issue of blurry reconstructions in standard CNNs.
- Engineered a robust data pipeline with a Stratified Group Splitting strategy to prevent data leakage between rotated variations of image samples, ensuring rigorous evaluation on unseen test datasets (OTI).

Cross-Platform Social Media Stance Analysis

NLP Engineer

Social Media Analytics Project

- Developed a Multi-layered Hybrid Analytical Framework to analyze public discourse regarding the 2025 DPR Demonstrations across X (Twitter) and YouTube, processing over 35,000 clean data points.
- Fine-tuned the IndoBERTweet transformer model for contextual stance analysis, achieving a superior accuracy of 85.90% compared to traditional models like SVM and XGBoost, enabling precise target-specific sentiment detection against actors (Government, Police, Protesters).
- Implemented Lexical Mutation Clustering using multilingual-e5-small embeddings and Louvain Community Detection to identify evolving narratives and slang (e.g., "Mulyono", "Gedung Kura-kura") often missed by traditional keyword tracking.

Vehicle Rental System

Fullstack Developer

Enterprise Application Programming Project

- Developed a scalable platform utilizing Java Spring Boot and AWS. Engineered an automated CI/CD pipeline using Git and Docker for seamless containerized deployments. Conducted rigorous API testing (Postman) and executed heavy performance load testing (Apache JMeter) to validate system stability and business logic.

AWARD

- Pertamina Sobat Bumi Scholarship 2025 (**Awardee**)
- 2nd Runner Up Datathon RISTEK Fasilkom UI 2026 (**AI Engineer**)
- Finalist of Web3 OJK & EKRAF Hackathon 2025 (**Project Lead**)
2nd Winner of Hackathon Hacksphere Powered by KAI and President University 2025 (**Fullstack Developer**)
- 1st Winner of Business Case Competition Brawijaya Dialogue Nexgen 2025 (**Business Analyst**)
- Finalist Software Development ITFest IPB University 2025 (**Mobile Developer**)

SKILLS & COMPETENCIES

Cloud & AI/ML: GCP, AWS, Docker, CI/CD, PyTorch, TensorFlow, RAG / LLM Workflows, Computer Vision, NLP.

Fullstack & Eng: Python, Java (Spring Boot), NestJS, React, Flutter, PostgreSQL, REST APIs, Git.

Testing & QA: Selenium, JUnit, Apache JMeter, Postman.

Certifications: GCP Certified (Vision API, NLP, Speech, BigQuery), DataCamp AI Engineer, Kaggle CV/ML.

Languages: English (C1 Fluent), Bahasa Indonesia (Native).
